<i>Foreword</i> by <i>Antonio Baldassarre</i>	XI
<i>Author's note</i>	XIV
I. The digi-global economy and its effects on the law	
1. New business “models” and new “places” in the digi-global era	1
2. Business, “places” and the law	3
2.1. The change of the ways and the places of law formation	3
2.2. The change in phenomena and places relevant to the law	4
3. Digi-global economy and taxation	5
II. New business models, new “places” and tax systems	
1. Tax systems and tax sovereignty	7
1.1. The “binary” dimension of taxation	7
1.2. Structural connection between fiscal phenomena and sovereignty	9
2. The relevance for tax systems of new business models related to new material “places”	11
3. The relevance for tax systems of new business models related to new virtual “non-places” and the OECD anti-BEPS action n. 1	13
3.1. Virtual business and traditional goods	14
3.2. Virtual business and virtual goods	18
4. Possible profiles of non-relevance of the novelties	21
4.1. Sovereign decisions on tax policy: the U.S. case	21
4.2. Technical difficulties in implementing the levy	25
III. Strategies of tax valorization of the new horizons of the digi-global economy	
1. Possible different levels of valorization	27
2. Valorization in State systems	28
2.1. Global business and State tax	29

	<i>page</i>
2.1.1. The problem of linking economic events with a relevant community	35
2.1.2. The problem of allocation of taxation authority: a Destination-Based Asset-Coordinated (DBAC) approach to corporate income tax	42
2.1.2.1. The positive income components	47
2.1.2.1.1. Passive income	52
2.1.2.1.2. CFCs and tax havens	54
2.1.2.2. The negative income components	55
2.2. Virtual business and State tax	57
2.2.1. The problem of a significant digital presence	59
2.2.2. The problem of allocation of taxation powers	61
3. Valorization in supranational systems	63
3.1. Intrinsic insufficiency of the extension of the levy at the supranational level	64
3.2. The problem of the most appropriate supranational integration model for the fiscal challenges posed by the digi-global economy	65
3.2.1. The institutional profile	65
3.2.2. The tax profile	65
3.2.2.1. The model of intergovernmental organizations	66
3.2.2.2. The model of integration with a fiscal function	67
4. Valorization internal to the information technology community	69
4.1. The “public expenditures” of the digital community	70
4.2. Decision making process in the digital community	71
4.2.1. The genuineness of the formation of consensus	71
4.2.2. Algorithms and the formation of consensus	73
4.3. Decision execution process of the digital community	76
IV. The effects of tax valorization of novelties of the digi-global economy on the structure of democratic fiscal systems	
1. Taxation and democracy	77
2. Equality and ability to pay	78
3. Legal certainty: tax avoidance and the criticalities of taxation under general clauses	80
3.1. Logical criticalities: insufficient predictability of tax obligations	82
3.2. Constitutional criticalities: insufficient legitimization of the bodies called to implement the tax obligations	85
4. Consent to tax imposition	87

	<i>page</i>
4.1. Democratic representation and the inadequacy of the mere rule of law	88
4.1.1. Improving the legitimacy of the decisions in international tax law issues	89
4.1.2. Legitimacy and residence-based taxation	91
4.2. Delegation of powers	93
5. Considerations about the European Union fiscality	96
5.1. Limited purposes and limits on tax jurisdiction	98
5.2. Political integration and tax integration	99
5.3. The counterproductive effect of competence forcing	107
5.3.1. The financial interests of the Union	107
5.3.2. State aids	108
V. Conclusions	
1. Thoughts for a fiscal governance of the digi-global economy	115
2. The permanent function of the States	115
2.1. Reduction of inequalities and general taxation systems	116
2.2. Reduction of inequalities and “personal” taxation	117
3. A legacy for a possible future of tax democracy in non-state communities	121
<i>Afterword</i> by <i>Anders Hultqvist</i>	123
